A map is the greatest of all epic poems.

Its lines and colors show the realization of great dreams.

—GILBERT H. GROSVENOR,
Editor (1899-1954)

THE SOCIETY'S cartographic tradition is as old as the magazine. The October 1888 issue of NATIONAL GEOGRAPHIC contained five foldout charts that tracked the great blizzard of that year. Since 1915, when the Cartographic Division was established, National Geographic Society maps, atlases, and globes have guided tens of millions of readers on countless voyages—real and imaginary—from deep into the earth's interior to the far reaches of the universe.

Beginning with the "Map of the Western Theatre of War," published in May 1918, the page maps and supplements have earned a worldwide reputation for accuracy, detail, and readability. The latter is due in part to attractive typefaces designed by calligrapher Charles E. Riddiford, who worked on the Society's staff more than half a century ago.

The current mapmaking effort results in six supplement maps inserted in NATIONAL GEOGRAPHIC yearly and some 60 page maps created to illustrate magazine articles. This amounts to a distribution of more than 60 million double-sided copies of the supplements and 600 million copies of the page maps.

The Society's world reference map with political boundaries, first published in 1922 and employing a projection by Alphons van der Grinten, has always been the most popular supplement. A new version of the world map, drawn on a projection by Arthur H. Robinson, appeared in the December 1988 NATIONAL GEOGRAPHIC. Any portrayal of the round earth on flat paper will induce distortions in size, shape, distance, and direction. No projection can entirely solve the problem, but the Robinson projection minimizes distortions, making it the most reasonable for a general-reference map of the world.

In 1960 the Society produced its first atlas. The *Atlas of the Fifty United States* was followed three years later by the *Atlas of the World.* With more than 1.5 million copies published, the world atlas is now in its third printing of the fifth edition, and a sixth edition is in the planning stage. The *Atlas of North America,* an award-winning volume containing spectacular satellite images of the continent, was published in 1985. In 1988 the division published its landmark *Historical Atlas of the United States,* as a centennial contribution to the nation.

During the 1980s Society cartographers have come to depend on a growing network of computer-graphics tools to assist them in design and production. Whether drawn with the help of high technology or by traditional means, the lines and colors of their maps will continue to show the realization of great dreams.
